1-项目背景介绍

1.1 项目背景

项目背景介绍:

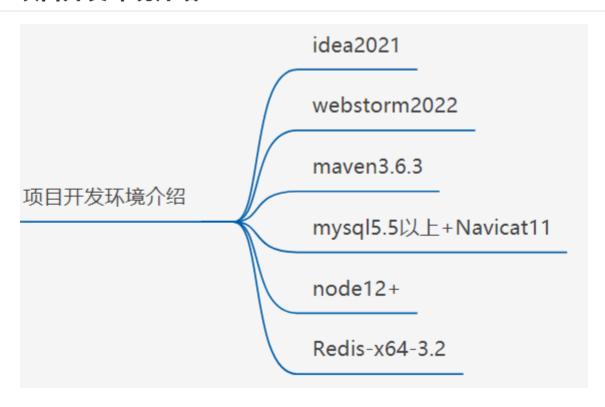

应届毕业生小明,顺利的通过了一家小型IT研发公司的面试,在定级薪资待遇时,技术总监发给小明一份原型 文档,该原型是公司刚启动的医保药品进销存管理系统,技术总监和小明说,在8小时内完成药品厂家与药品信 息管理二个模块功能,框架和登录自己搭,最好能有权限功能,日志功能等,技术栈不限,但是如果能用最新 最合理的技术栈有加分,完成的时间越快,功能越完善,加分项越多。最后根据分数在来定级薪资待遇。

小明忐忑的打开文档,当看到文档的一瞬间,小明嘴边露出了一丝微笑,心道:"辛亏毕业设计是基于若依框架二次开发的,就这原型需求1小时搞定,看来这次可以谈个好待遇了"。

2-项目初始化

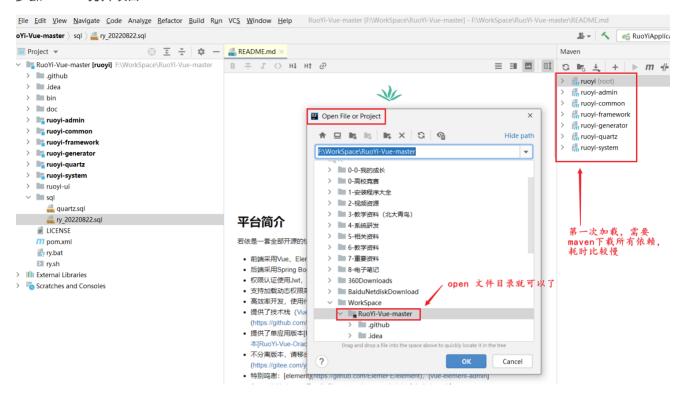

2.1-若依框架介绍与下载

2.2-项目开发环境介绍

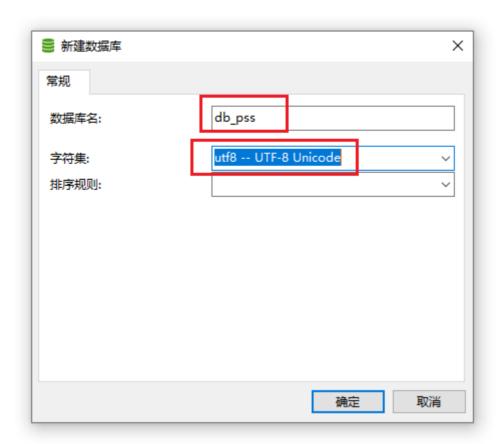

2.3-后端源码加载及配置

步骤1: idea打开项目

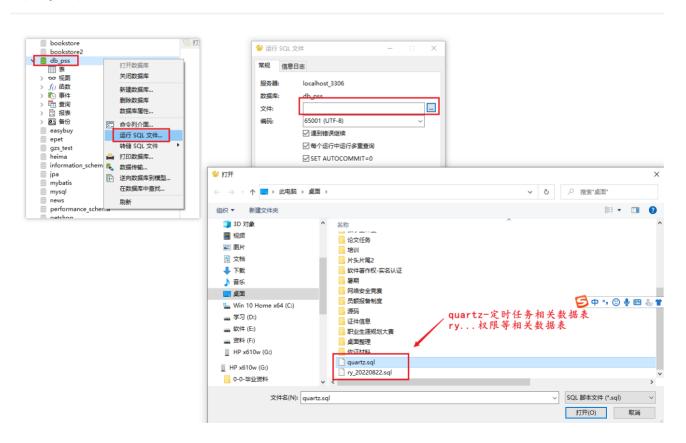

步骤2: 初始化数据库

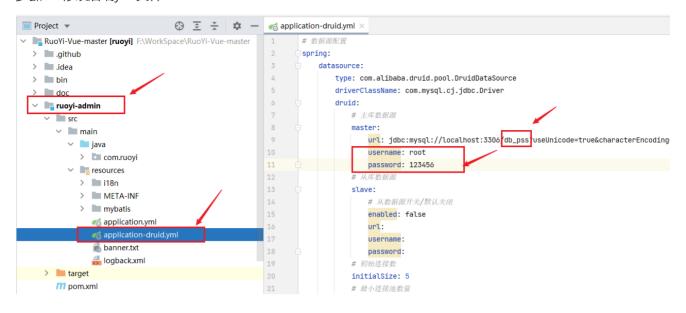

创建数据库

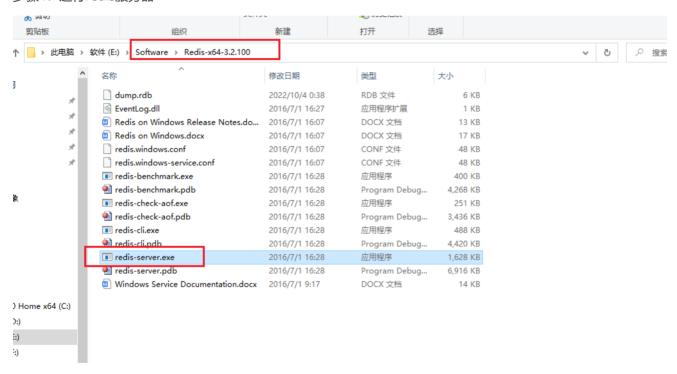

运行SQL脚本

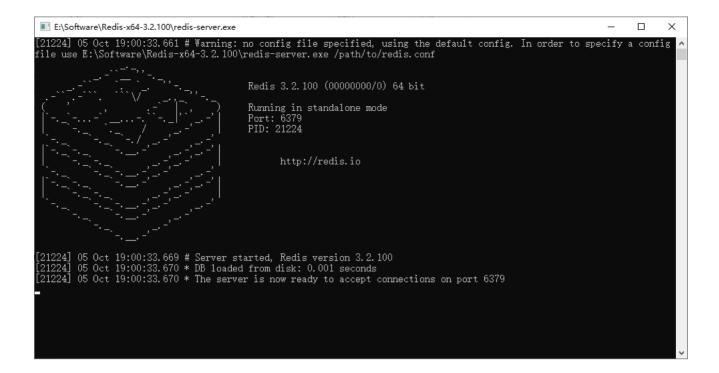

步骤3:修改后端yml文件

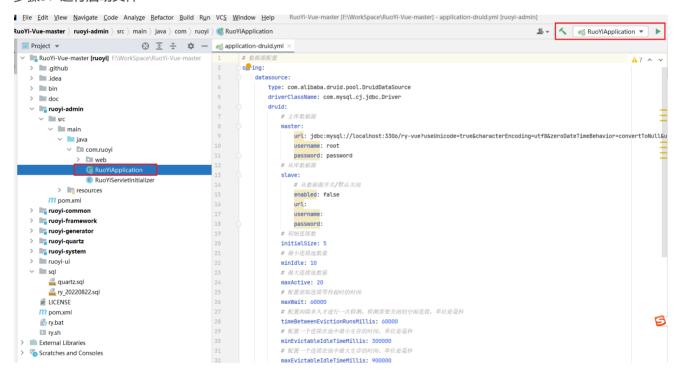

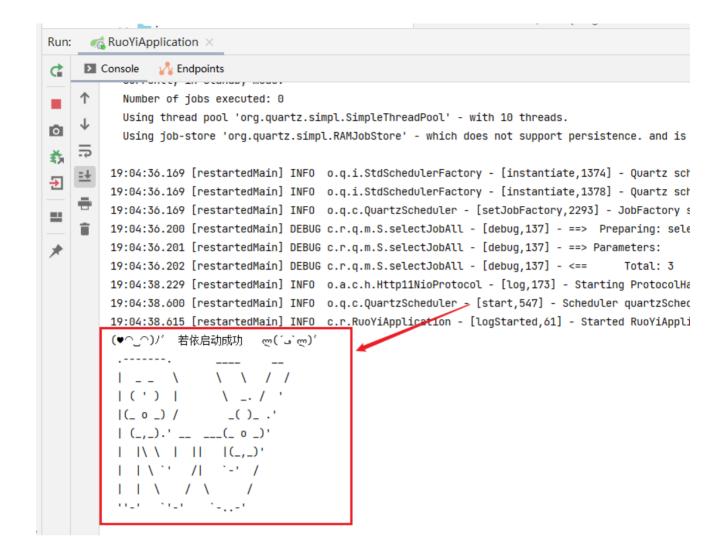

步骤4: 运行redis服务器

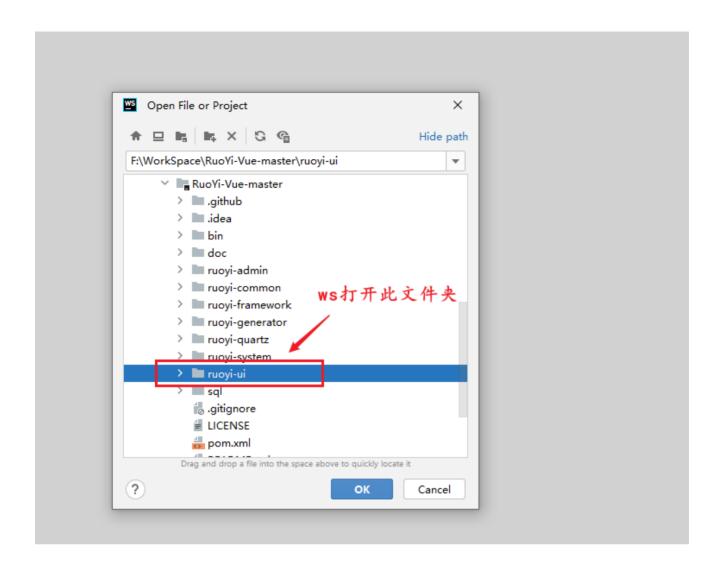

步骤5: 运行启动文件

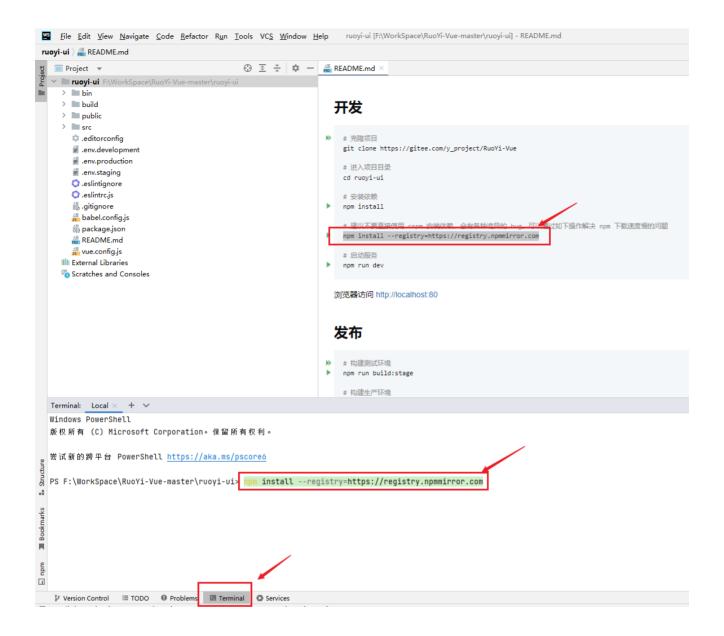

2.4-前端源码加载

步骤1: 打开前端项目文件

步骤2:安装依赖

步骤3: 启动服务

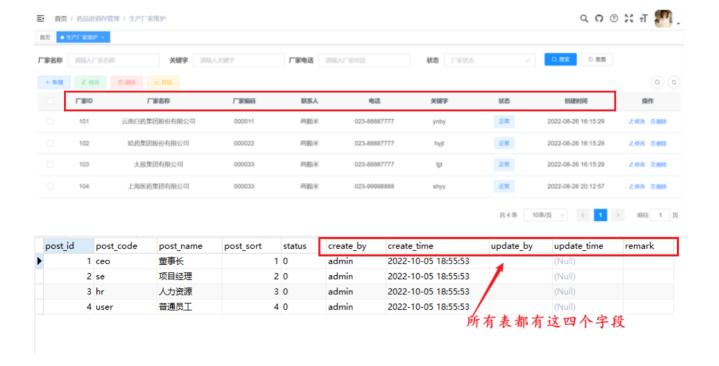

3-模块开发-生产厂家

3.1 后端开发

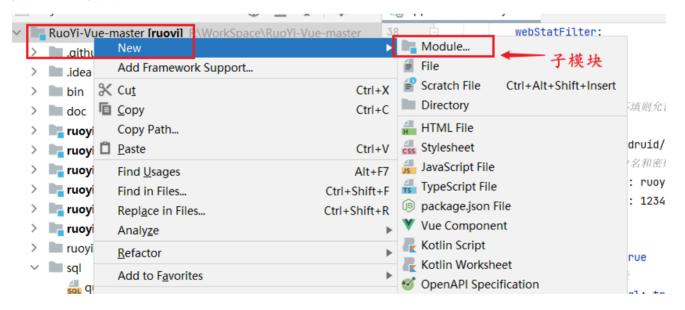

3.1.1 设计厂家与药品数据表

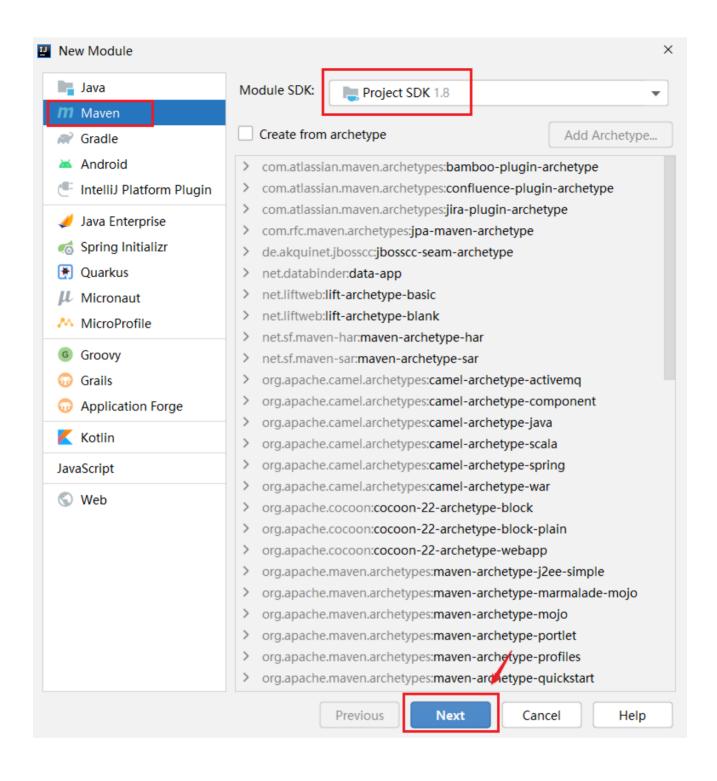

根据页面原型及参考作者原有表 进行设计

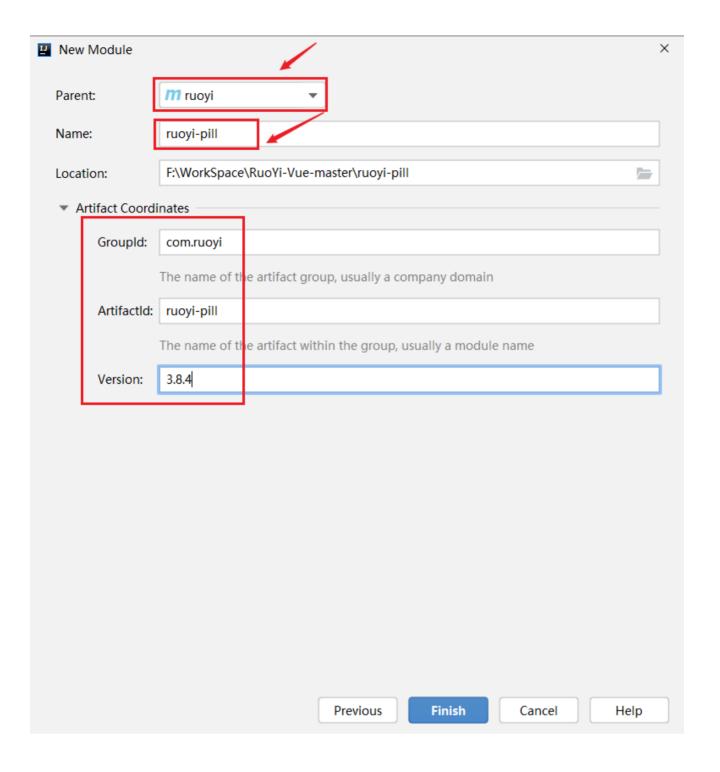

3.1.2 创建子模块及各层

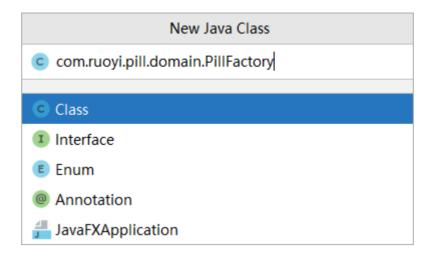

步骤1: 创建子模块

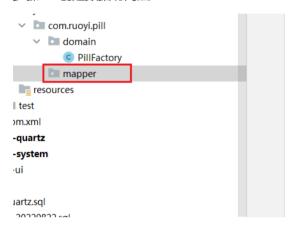

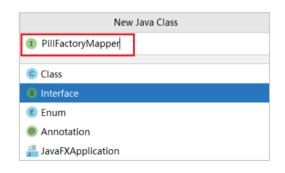

步骤2: 创建实体层

步骤3: 创建数据访问层

映射XML文件

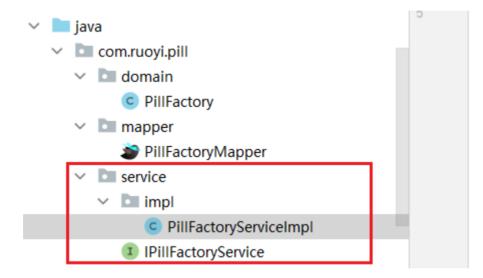

根据配置文件application.yml

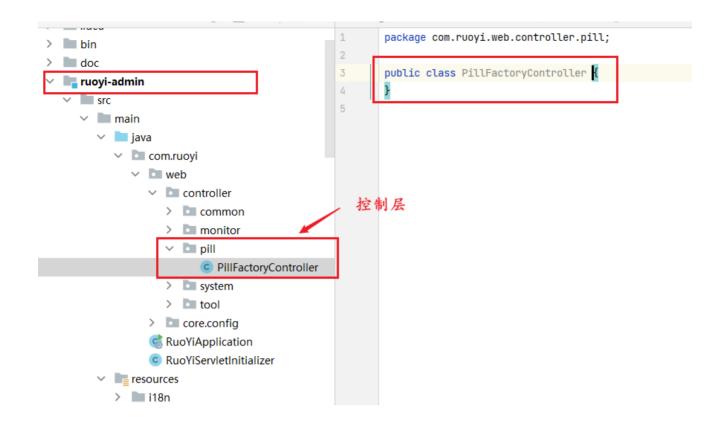

PillFactoryMapper.xml原始代码

步骤4: 创建服务层

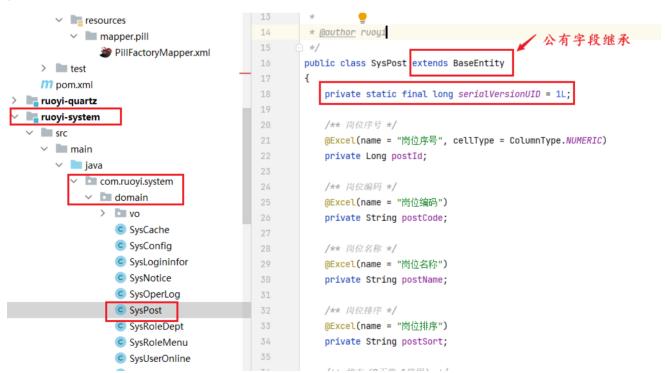

步骤5: 创建控制层

3.1.3 常规开发-查询生产厂家

步骤1:实体层

参考

参考POM代码

```
SysRoleMenuMapper.xml
                                                         <description>
                SysUserMapper.xml
                                            15
                                                            system系统模块
                SysUserPostMapper.xml
                                            16
                                                         </description>
                SysUserRoleMapper.xml

77
                     '}';
78
        }
79
   }
```

步骤2:数据访问层

接口代码

```
public interface PillFactoryMapper {
   public List<PillFactory> selectPillFactoryList(PillFactory factory);
}
```

XML代码

```
<resultMap type="PillFactory" id="PillFactoryResult">
 1
             <id property="factoryId" column="factory id"/>
 2
             <result property="factoryName" column="factory name"/>
 3
             <result property="factoryCode" column="factory_code"/>
 4
             <result property="contact" column="contact"/>
 5
 6
             <result property="phone" column="phone"/>
 7
             <result property="keyword" column="keyword"/>
             <result property="status" column="status"/>
 8
             <result property="createBy" column="create by"/>
 9
             <result property="createTime" column="create time"/>
10
11
             <result property="updateBy" column="update by"/>
12
             <result property="updateTime" column="update time"/>
             <result property="remark" column="remark"/>
13
        </resultMap>
14
15
16
        <sql id="selectFactoryVo">
             select factory id, factory name, factory code, contact, phone, keyword, status,
17
    create by,
18
                    create_time, update_by, update_time, remark
19
             from pill_factory
20
        </sql>
21
        <select id="selectPillFactoryList" parameterType="PillFactory"</pre>
    resultMap="PillFactoryResult">
             <include refid="selectFactoryVo"/>
23
24
             <where>
                 <if test="factoryName != null and factoryName != ''">
25
                     AND factory name like concat('%', #{factoryName}, '%')
27
                 </if>
                 <if test="keyword != null and keyword != ''">
28
29
                     AND keyword like concat('%', #{keyword}, '%')
30
                 </if>
                 <if test="phone != null and phone != ''">
31
32
                     AND phone like concat('%', #{phone}, '%')
33
                 </if>
                 <if test="status != null and status != ''">
34
35
                     AND status = #{status}
36
                 </if>
37
             </where>
38
        </select>
```

步骤3:服务层代码

接口代码

```
public List<PillFactory> selectPillFactoryList(PillFactory factory);
```

实现类代码

```
1
    @Service
2
    public class PillFactoryServiceImpl implements IPillFactoryService {
        @Autowired
4
        private PillFactoryMapper pillFactoryMapper;
5
        @Override
6
        public List<PillFactory> selectPillFactoryList(PillFactory factory) {
7
8
            return pillFactoryMapper.selectPillFactoryList(factory);
9
        }
10
```

步骤4:测试类测试

pom依赖

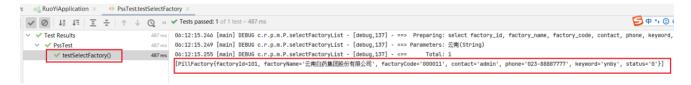

PssTest代码

```
package com.ruoyi.web;

import com.ruoyi.pill.domain.PillFactory;
import com.ruoyi.pill.service.IPillFactoryService;
import org.junit.jupiter.api.Test;
import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.boot.test.context.SpringBootTest;
```

```
8
 9
    import java.util.List;
10
    @SpringBootTest
11
12
    public class PssTest {
13
        @Autowired
14
        private IPillFactoryService pillFactoryService;
15
        @Test
16
17
        void contextLoads() {
18
        }
19
20
        @Test
21
        public void testSelectFactory(){
22
             PillFactory pillFactory = new PillFactory();
             pillFactory.setFactoryName("云南");
23
24
            List<PillFactory> pillFactories =
    pillFactoryService.selectPillFactoryList(pillFactory);
25
            System.out.println(pillFactories);
26
        }
27
    }
28
```

运行结果

3.1.4 常规开发-controller代码

```

     * 新增生产厂家信息
     * @param pillFactory 生产厂家信息
* @return 结果
```

修改配置

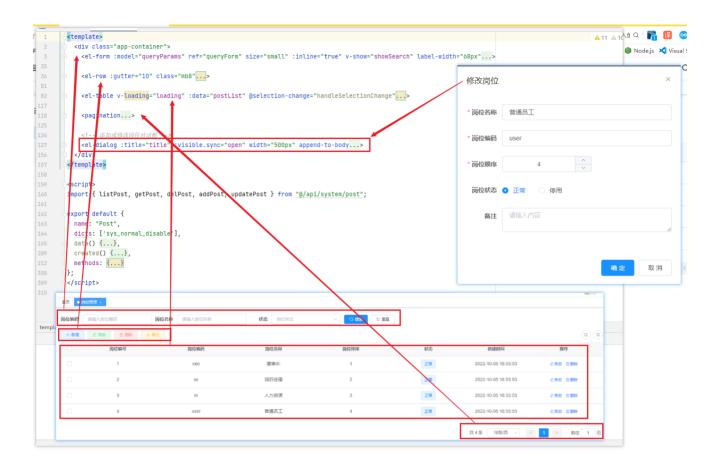

重启服务器,需要把原始的记录删除后,在导入,这时候生成的就可以看到我们的配置信息了

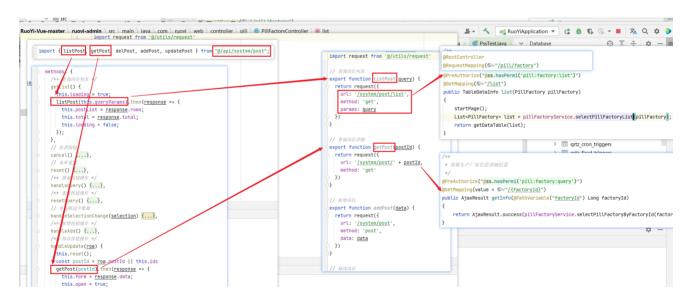

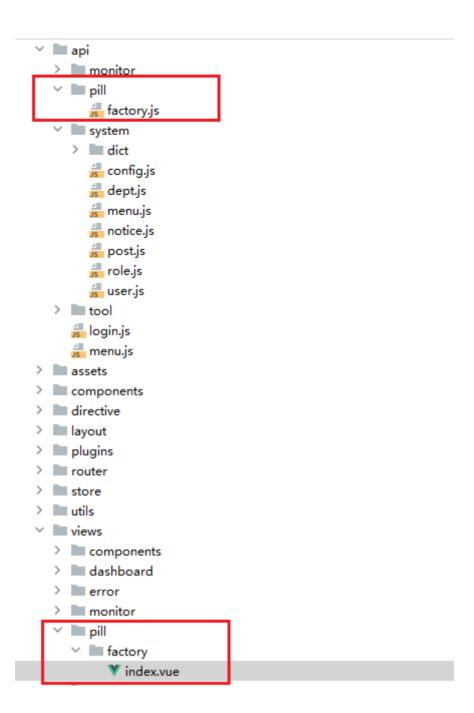

3.2 前端开发

3.2.1 常规开发-创建组件与脚本

组件各部分详解

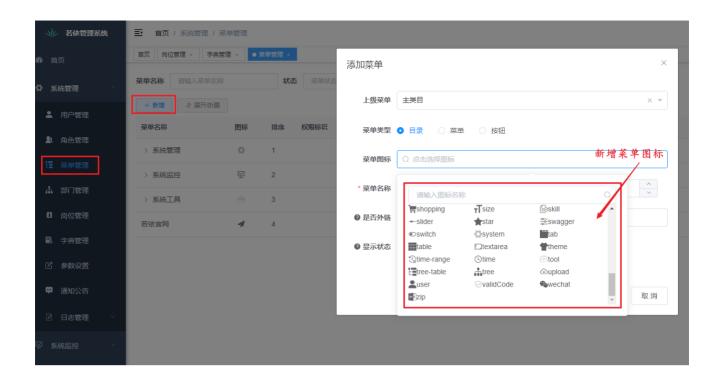

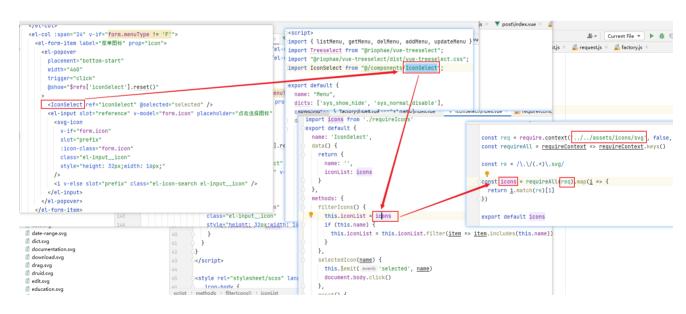

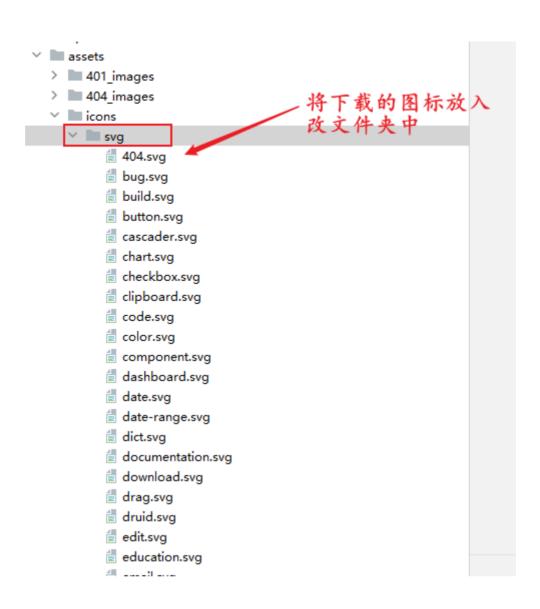

3.2.2 菜单创建-新增自定义图标

自定义图标

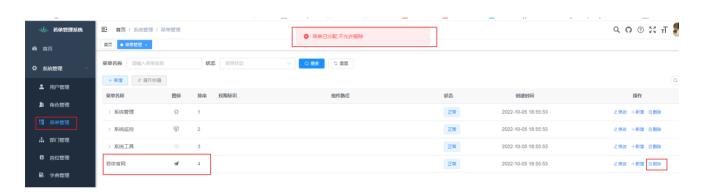

添加菜单

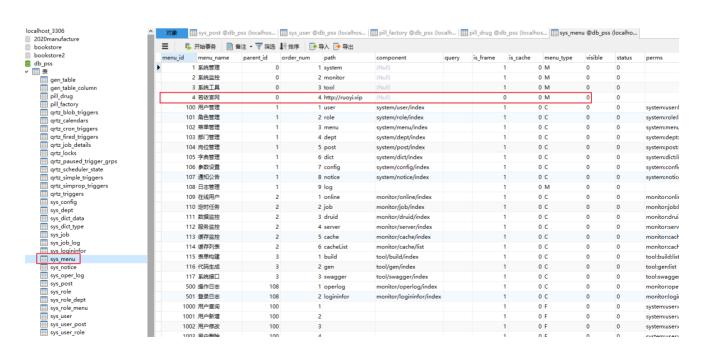

3.2.3 菜单创建-菜单栏目

删除广告菜单

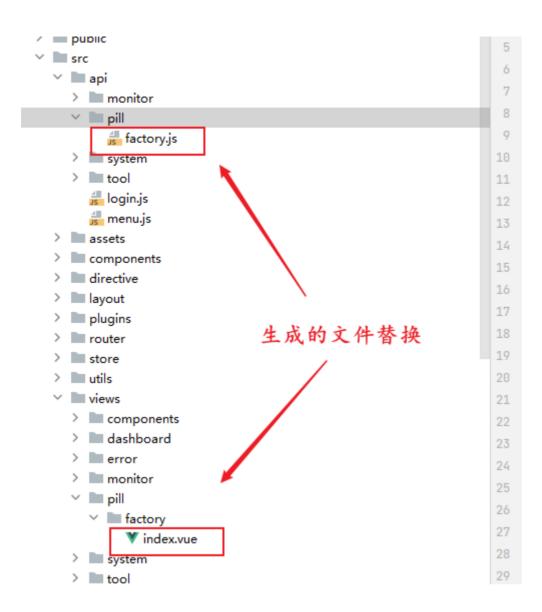

添加菜单

添加菜单

3.2.4 自动代码生成模式开发

调整细节页面

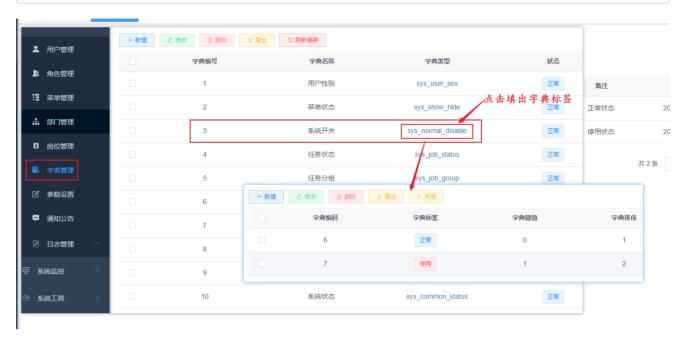

```
<el-table v-loading="loading" :data="factoryList" @selection-change="handleSelectionChange">
 <el-table-column type="selection" width="55" align="center" />
 <el-table-column label="厂家ID" align="center" prop="factoryId" width="80" />
 <el-table-column label="厂家名称" align="center" prop="factoryName" min-width="200" />
 <el-table-column label="厂家编码" align="center" prop="factoryCode" />
 <el-table-column label="联系人" align="center" prop="contact" />
 <el-table-column label="电话" align="center" prop="phone" />

 5
                 :label="dict.label"
 6
                 :value="dict.value"
              />
 8
 9
             </el-select>
          </el-form-item>
10
11
12
```

3.2.5 增删改查功能调试

查询功能

后端代码修改

```
<select id="selectPillFactoryList" parameterType="PillFactory"</pre>
    resultMap="PillFactoryResult">
 2
        <include refid="selectPillFactoryVo"/>
 3
        <where>
            <if test="factoryName != null and factoryName != ''"> and factory_name like
4
    concat('%', #{factoryName}, '%')</if>
            <if test="factoryCode != null and factoryCode != ''"> and factory code = #
    {factoryCode}</if>
            <if test="contact != null and contact != ''"> and contact = #{contact}</if>
 6
            <if test="phone != null and phone != ''"> and phone like concat('%', #{phone}, '%')
 7
    </if>
            <if test="keyword != null and keyword != ''"> and keyword like concat('%', #
8
    {keyword}, '%')</if>
9
            <if test="status != null and status != ''"> and status = #{status}</if>
10
        </where>
11
   </select>
```

新增功能

相关代码

验证代码

```
// 表单校验
rules: {
factoryName: [
{ required: true, message: "生产厂家名称不能为空", trigger: "blur" }
}

factoryCode: [
required: true, message: "生产厂家编码不能为空", trigger: "blur" }

required: true, message: "生产厂家编码不能为空", trigger: "blur" }

}
```

状态单选

```
<el-form-item label="生产厂家状态" prop="status">
1
2
     <el-radio-group v-model="form.status">
3
       <el-radio
4
         v-for="dict in dict.type.sys_normal_disable"
5
         :key="dict.value"
         :label="dict.value"
6
7
       >{{dict.label}}</el-radio>
8
     </el-radio-group>
   </el-form-item>
```

3.2.6 功能权限分配

用户管理

重置密码

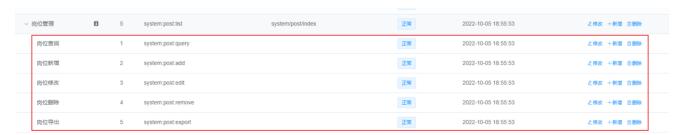

角色管理

换成新用户登录

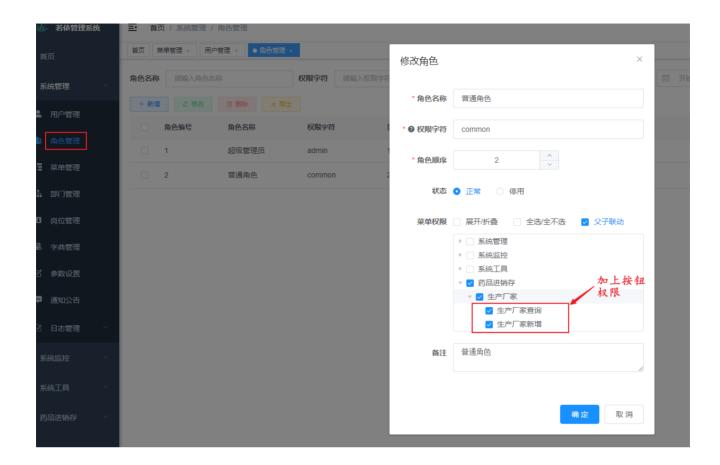

参考岗位权限设置

设置生产厂家按钮权限

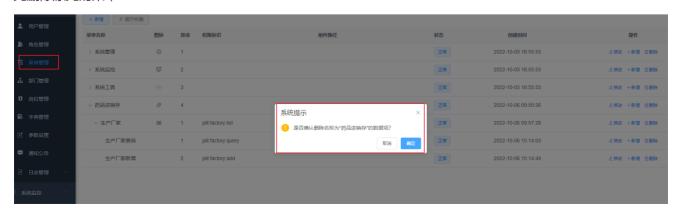

换账号登录

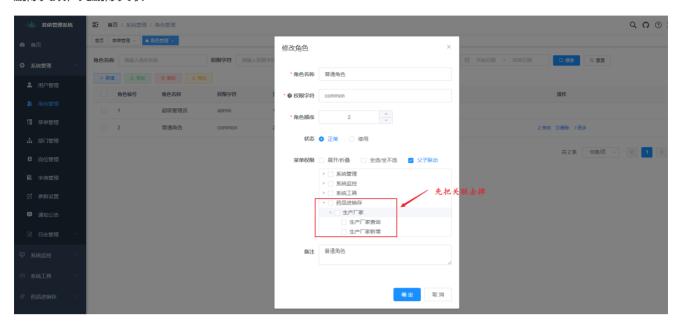

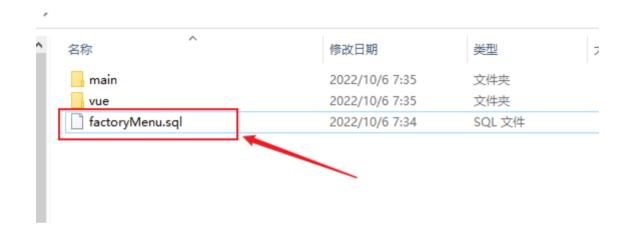

3.2.7 脚本实现权限分配

先删除原先的菜单

删除失败, 先删除关联

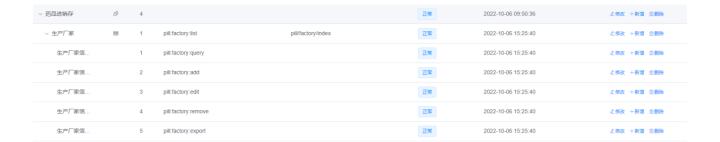

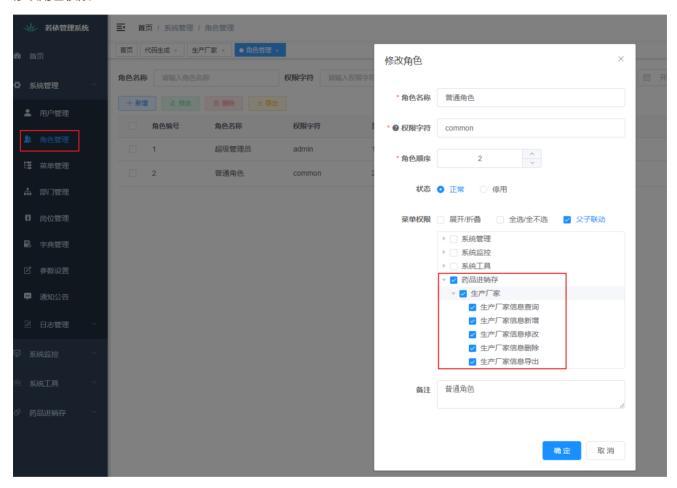

运行脚本后

∨ 系统工具		3			正常	2022-10-05 18:55:53	之修改 +新増 自删除
表单构建	⊞	1	tool:build:list	tool/build/index	正常	2022-10-05 18:55:53	之修改 十新増 自删除
〉 生产厂家信息		1	pill:factory:list	pill/factory/index	正常	2022-10-06 15:25:40	之修改 +新増 自删除
> 代码生成		2	tool:gen:list	tool/gen/index	正常	2022-10-05 18:55:53	之修改 +新増 自删除
系統接口		3	tool:swagger:list	tool/swagger/index	正常	2022-10-05 18:55:53	之修改 十新增 自删除
药品进销存	0	4			正常	2022-10-06 09:50:36	之修改 +新増 自删除

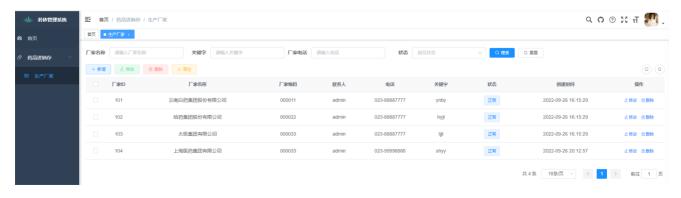

调整菜单

修改角色权限

切换角色

4-模块开发-药品信息

4.1 字典管理

分析药品信息中 各类型状态

新增字典类型

添加字典数据

字典类型	pill_drug_dtype			
* 数据标签	中草药			
* 数据键值	0			
样式属性	请输入样式属性			
*显示排序	1	^		
回显样式	默认(default)	~		
状态	● 正常 ○ 傷	開		
备注	请输入内容			<i>h</i>
			确定	取消

添加字典数据

字典类型	pill_drug_dtype	
* 数据标签	西药	
* 数据键值	1	
样式属性	请输入样式属性	
* 显示排序	2 ^	
回显样式	默认(default)	
状态	● 正常 ○ 停用	
备注	请输入内容	
	确定取消	i

添加字典类型
×

* 字典名称	处方类型	
* 字典类型	pill_drug_ptype	
状态	○ 正常 ○ 停用	
备注	处方类型列表	

确定

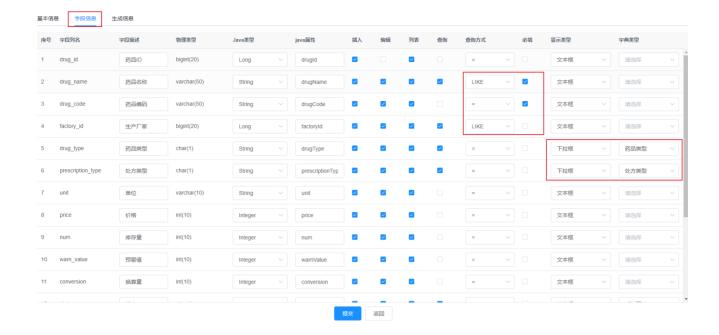

取消

添加字典数据
×

4.2 代码生成器详细属性设置

根据原型设计页面

4.3 全智能模块开发

生产代码

替换后端 前端,运行菜单SQL脚本

4.4 查询调整-多表链接

后端代码修改

PillDrug

```
1
    private PillFactory pillFactory;
2
    public PillFactory getPillFactory() {
3
4
        return pillFactory;
5
 6
7
    public void setPillFactory(PillFactory pillFactory) {
        this.pillFactory = pillFactory;
8
9
10
11
12
     .append("pillFactory", getPillFactory())
```

PillDrugMapper.xml

```
<resultMap type="PillDrug" id="PillDrugResult">
 1
 2
             <result property="drugId" column="drug id"</pre>
